Americans are Lynch positive

95% do not know it

What is Lynch Syndrome?

Lynch syndrome is a genetic condition that increases a person's risk for certain cancers. It is the most common inherited cause of colorectal and endometrial cancers. Many individuals with a Lynch mutation develop related cancers at very early ages, much younger than the general population. Screening should begin earlier for patients with a known Lynch mutation.

Increased risk of cancer may include:

COLORECTAL
SMALL INTESTINE
BREAST
BLADDER
OVARIAN
BILE DUCT
LIVER
PROSTATE
KIDNEY
SEBACEOUS CARCINOMA
URINARY TRACT
STOMACH
PANCREATIC
ENDOMETRIAL

To learn more visit [AliveAndKickn.org](https://www.aliveandkickn.org), or talk to a genetic counselor about your family history and to assess your risk.

The Colon Cancer Coalition has partnered with AliveAndKickn, a hereditary cancer foundation, to help expand colorectal cancer and Lynch syndrome education.
